

# ABNgen™

Simplified Medical Necessity Verification for ABN Generation

## 25K

providers use ABNgen™ within their PM/EHR applications

## 10K+

average ABNs determinations generated monthly

## 30+

years of unmatched medical necessity expertise

“ From discovery to development this was one of the quickest and most seamless projects I’ve managed. ”

– Associate EHR Product Manager

### What is ABNgen™

Providers who render services to Medicare patients recognize the **Advance Beneficiary Notice of Non-coverage (ABN)** as a necessary step toward ensuring proper payment for some non-covered services. ABNgen™ streamlines the completion process ensuring CMS' strict guidelines are met.

### ABNgen™ Key Differentiators

- Uses demographic information to auto-populate the ABN form
- Uses patient's diagnosis and procedure to verify medical necessity for Medicare LCD and NCD policies
- Notifies when service with Medicare frequency limitations may require an ABN
- Verifies procedures against Alpha II's industry-leading medical necessity database for non-Medicare services
- Quickly returns completed ABN and the policy link that triggered the decision of non-coverage
- Ensures ABN is presented to patient at appropriate time

### Three Steps to Seamless Implementation

- 1 Integrate through our ABNgen™ web services
- 2 Onboard using bulk registration process
- 3 Ensure proper payment for non-covered services
