

Orthopedic Surgery

THE CHALLENGE

A PM/EHR partner needed to expand its platform to include **clinical content with coding and billing edits** for their **Orthopedic Surgery** submitters. The main area of concern was the implant costs and reimbursement rates. With a challenging billing profile, handling implants that surgeons want to use is also a burden to being profitable. The partner also discovered orthopedic surgeons were performing too many procedures outside of their specialty and the claims were denied due to inaccuracy.

THE SOLUTION

With our hosted, SaaS-based content platform, Aptarro was able to offer a **fully-integrated solution**. Having 17 different provider fee schedules, Aptarro's specialty is its **focus on clinical content, which is updated in near real-time**, while other claim scrubbers maintain their own content quarterly. Aptarro's specialty-focused approach to helping identify edits such as: injury date validation, provider based edits, and Aptarro medical necessity - proprietary edits found astounding successes.

Improve your organization's financial and operational health.
